

Noah Arooji

Charlottesville, VA | [LinkedIn](#) | [Portfolio](#) | noaharooji@gmail.com

Education

University of Virginia , Charlottesville, VA	Expected May 2027
B.S. Computer Science & B.A. Applied Statistics	GPA: 3.80
Relevant Coursework: Data Structures & Algorithms, Computer Systems I & II, Software Development Essentials, Probability, Regression Analysis	

Technical Skills / Certifications

Languages: Java, C, Python, JavaScript/TypeScript, R, SQL, HTML, CSS, MATLAB

Frameworks & Tools: React, Next.js, Node.js, Tailwind, Git, Selenium, BeautifulSoup, NumPy, openpyxl

Certifications: 2025 Oracle Cloud Infrastructure (OCI) Foundations, 2025 Oracle AI Foundations Associate

Other: Microsoft Office Suite, (NASM) Certified Personal Trainer, CITI Basic Research

Relevant Experience

Mythics, LLC, Virginia Beach, VA , <i>Software Engineer Intern</i>	May 2025 - Present
- Led a sales team of 5–10 through procurement of an internal AI prospecting tool that surfaces 20+ high-quality leads per run - Drove over \$1M in net new pipeline opportunities per use by creating an intuitive sales opportunity dashboard - Automated data ingestion and enrichment with Express.js backend API, cutting manual data entry by 100%	

School of Data Science, University of Virginia , <i>Machine Learning Researcher</i>	May 2025 - Present
- Engineered an automated web scraping pipeline using Selenium and BeautifulSoup, which extracted 1000+ structured records in 8 minutes, down from 3 hours, resulting in 95.6% increased efficiency - Calculated anomaly detection of time series inconsistencies using NumPy and openpyxl, successfully catching 30+ inconsistent time series data sets - Research synthetic data generation for enhancing time-series prediction in language models	

Collaborative Robotics Lab, University of Virginia , <i>Robotics Researcher</i>	Jan 2025 - June 2025
- Developed LLaMA-3 powered AI speech-to-text and text-to-speech, enabling human-robot communication, improving interaction latency by 25% - Designed and iterated on natural language systems optimized for low-latency deployment on embedded Stretch robots - Modularized ROS2 nodes for LLM-based communication, cutting integration time by ~40% and streamlining debugging	

Projects

Sustainable Prompting Chrome Extension , <i>HooHacks 2025 - PromptLite</i> Devpost	March 2025
- Built a Chrome Extension in 24 hours using React, TailwindCSS, and Vite to reduce token waste during AI prompting, reducing user trial-and-error time by 30% - Conducted real-time testing with over 25 users to improve UX and rapidly reduce average prompt iterations by 1.8x	

AI Macronutrient Tracker - Full Stack Application , <i>Personal Project</i>	Sep 2024 - Dec 2024
- Leveraged React.js, TypeScript, and Google Vision API to develop a web application which calculates accurate macronutrient and calorie data from photo recipes - Designed and built initial MVP to assure capability and user-friendly functionality for web and mobile deployment
